

Deploy and manage a Kubernetes application (Extension) from Azure Marketplace

- **Azure Marketplace offers a wide range of IT solutions and services** from leading tech providers. It simplifies deployment and management
- Azure Marketplace **offers Kubernetes applications** designed for easy deployment and management **on services like AKS**
- To deploy and manage a Kubernetes application from the Azure Marketplace, **you can use:**
 - **Azure Portal**
 - Browse the Azure Marketplace -> Containers -> Kubernetes Apps
 - “Extensions + applications” blade at AKS level
 - **Azure CLI**
 - “az k8s-configuration” commands
- You need to **accept the terms and conditions** of the offer
- **Some** offerings are **free**, and **some** have a **price**
- **During initial** application extension **deployment** in AKS, **system resources** (e.g. billing-operator, extension agent, extension-operator) **are installed** for proper feature functionality
