

Let's create our first AKS cluster

- We will create one AKS clusters using Azure CLI and simulate the creation of another using Azure Portal
- We will take a quick look over the available panels
- A resource group is just a logical group used to organize resource in Azure
- We will understand why a second resource group gets created for each AKS cluster and its goal
 - The infrastructure resource group contains other Azure resources required for proper functionality of the AKS cluster
 - Infra RG = Node RG = MC RG
