

GPU node pools

- Graphical processing units (GPUs) are frequently used for workloads that need a lot of computation, like graphics and visualization workloads
- In Azure, GPU optimized VM sizes start with N, for example, NC-series
- For AKS node pools, a minimum size of Standard_NC6 is recommended
- `--node-taints sku=gpu:NoSchedule`
- Methods to use GPU in AKS:
 1. Use the AKS GPU image
`--aks-custom-headers {UseGPUDedicatedVHD=true, UseGPUDedicatedVHD=true, usegen2vm=true}`
 2. Manually install the NVIDIA device plugin
Uses a DaemonSet to supply the necessary GPU drivers on each node
- **IMPORTANT!:** If you choose to use the AKS GPU image, don't install this DaemonSet
