

Exploring the AKS cluster – Kubernetes side

- **csi-azuredisk-node** and **csi-azurefile-node**
 - CSI = Container Storage Interface
 - CSI is a standard used for providing storage services to containerized applications
 - CSI was adopted by AKS to write, deploy and iterate plugins to expose a new and improved storage system
 - CSI allows AKS to avoid touching Kubernetes code and wait for its release cycles
 - CSI replaces “in-tree” drivers that are part of the Kubernetes code and includes additional features
 - Implemented as DaemonSets to help providing persistent storage to containers and simplify storage management experience for AKS users
