

Connect to AKS nodes

- By default, AKS nodes don't have a public IP
- We will examine later a few methods on how to connect to AKS nodes, but for the moment I will share:
 - The official documentation from Microsoft on how to connect to nodes
 - A handy 3rd party tool that uses nsenter (Linux tool that allows you to enter the namespace of a running process)
 - These will create a helper pod scheduled on the node that we want to access
