

AzureLinux (Mariner) in AKS

- **AzureLinux (Mariner)**
 - Open-source Linux distribution developed by Microsoft
 - Usable in AKS and will become AKS's default Linux container host Operating System
 - It is Generally Available (GA)
 - Lightweight and consisting only of the necessary packages required to run container workloads, resulting in:
 - Patch elimination/reduction
 - Maintenance of unnecessary packages
 - Low attack surface
 - It has a Microsoft hardened kernel that has been customized for Azure at Mariner's base layer
 - Uses RPM package format and, TDNF is the package manager
 - AKS clusters can use AzureLinux only; AzureLinux node pool(s) can be added after the cluster creation as well
