

Default OS disk size

- The OS disk size is determined by the number of vCPUs that the VM has, as per the following table:

vCPUs	Default OS Disk Tier / size
1 - 7	P10 / 128 G
8 - 15	P15 / 256 G
16 - 63	P20 / 512 G
64+	P30 / 1024 G

- Notes:
 - The default OS size will be applied only when:
 - Ephemeral OS disks are not supported
 - OS disk size is not explicitly set
 - You cannot change this size after cluster or node pool creation
